

## The "Revelation of Jesus" code in the Peshitta NT

our Lord	donned	of Yeshua	the revelation	I am ashamed
למרן	לבש	דישוע	גלינא	אבהת
for His tranquility	Alas ! meditation	about crushing Him	sprang up	
לכושה	און	הניא	בדשה	יעא

I am ashamed.

The revelation of Jesus clothed our Lord.

A plot to crush Him sprang up.

Alas , for His tranquility !

אבהתגלינאדישועלבשלמרניעאבדשההניאאוןלכושה

-99067 38.393 42.455 Hebrews 5:5.16 Acts 17:11.18

The ELS reference is 99067 characters between rows.

There are 1 displayed terms in the matrix.

The matrix starts at Acts 17:11.18 and ends at Hebrews 5:5.16.

The matrix spans 3863614 characters of the surface text.

The matrix has 40 rows, is 1 columns wide and contains a total of 40 characters.

There is 1 significant term in the matrix.

The matrix odds are  $2.47156926329144 \times 10^{38}$  to 1 in favour of significance.

The cumulative 'R' Factor for the displayed matrix is 38.393.

I searched for the term, “גלינא דישוע” (“**The revelation of Jesus**”) in **The Peshitta NT**. It consists of the first two words of the book of Revelation in The Aramaic Crawford manuscript which is used in The 1905 Critical edition of The Peshitta NT, also known as The Syriac Bible , published by The United Bible Society, 1979. The 40 letter code occurs once as an ELS, skipping 99,067 letters 39 times to find each letter of the 30 letter code attached to each ends of the 10 letter initial search term, as displayed above.

The initial search term , “גלינא דישוע” (“**The revelation of Jesus**”) has a 3% probability (at skips of +-2 – +-100,000) of occurring in **The Peshitta NT** . There are 30 more letters attached , spelling out the above sentences in Aramaic. One word precedes the phrase, the other seven words follow it, forming a ten word Aramaic code of three sentences ! The composite probability is one in 10 to the 38<sup>th</sup> power ! This is not a likely scenario for a 2000 year old text written by any other than a superhuman intelligence !

The code is found by connecting the end of Revelation to the beginning of Matthew , end to end, making the NT a circular string of 461,094 letters. The last letter of the code (ܐ) is at Acts 17:11, letter 18 (in Aramaic) and skips 99,067 letters to the next to last letter , (ܘ), etc. Each skip covers 21% of the NT text, so in the course of the entire search the Codefinder program cycles through the NT eight times plus !

Remove one letter from this Peshitta NT, and the code disappears ! The number of letters 461,094 in the 27 books is

absolutely essential to the existence of this code. Remove one from any of its 27 books, and it all falls apart.

The matrix odds are  $2.47 \times 10^{38}$  to 1 in favour of significance.

This is the second long code covering **the Peshitta NT** I have found. The other is a 25 letter code, covering 96% of the NT :

– להלן אהי בן אל יניצ יושע באיבוס

*Where should The Son of God dwell ? Jesus shall blossom forth in a manger.*

It also is a toroidal search , like the 40 letter code, cycling through Revelation back almost to the starting point at Acts 27.

Neither of these codes, or anything with even the initial two word phrase, occur in the Tanach control text (a scrambled text of The Old Testament).

The Christmas code was found by searching for יושע באיבוס (“Jesus in a manger) – a Hebrew term. The probability of this phrase occurring by itself (at skips of +2 – +-100,000) , is 2% in **the Peshitta NT**. The other terms are extensions of that phrase, discovered by reading the letters attached to the string of letters following it, letter by letter, no spaces between ! The probability for the extended code of 25 consecutive letters in two very plain sentences is, one in 10 to the 20<sup>th</sup> power !

A test of **The Greek NT (1550 Textus Receptus, Tischendorf’s 8<sup>th</sup> edition, The Byzantine NT, Nestle’s Greek NT, Westcott & Hort’s edition**, and even **Josephus’ Antiquities in Greek** (1.63 million letters !) shows , when searching just for the one word , **αποκαλυψις** (“Revelation”) – **absolutely nothing** ! At skips of +2 – +-100,000 , the term has a

0.5 % probability of occurring in Josephus and 0.25 % in The Greek NT. No code exists in any of those texts with the word “**Revelation**” in it. Only **The Peshitta NT** has it. If the NT were to have codes in it, we should expect at least this word to be found as an ELS. The fact that it is not found in any Greek edition is quite a “**revelation**” !

The Peshitta text has remained unchanged from the first century; all 350 manuscripts are essentially in uniform agreement. The Greek mss. are not nearly as uniform, even among the Byzantine and Textus Receptus traditions. The Critical texts also differ; there is no settled tradition or standard. Every new Nestles or UBS edition has numerous changes from the 26 previous editions.

The code itself seems to be the thoughts of a disciple of our Lord – “**Maran**” (“**Our Lord**”), found in the code, is a title the disciples often used for Jesus ( about 240 times), as written in **the Peshitta NT** .

I searched for the first two words of the Book of Revelation in Aramaic. The skip rates I entered were 2 to 100,000. The phrase only occurs once in this range , at -99,067 . A negative skip means that the term occurs backward in a forward search of the NT. The code’s letters are found in 15 books , including the 4 Gospels, Acts, Romans, 1&2 Cor. , Ephesians, Philippians, Titus, Hebrews, 1&2 Peter and Revelation . The version I have searched here is the 27 book canon of the Peshitto, based on the critical editions of Gwilliams & Pusey for the Gospels , Gwilliams edition of Paul’s epistles and Acts, and John Gwynn’s critical edition of the minor Catholic Epistles and Revelation.

Even though the codes letters are not found in all the 27 books of the NT canon, the code relies on all the books having exactly the number of letters each one contains, or the code falls apart.

I have tried four editions of the Peshitta & Peshitto NT, as well as a scrambled text of the Hebrew Bible. None of them has any such code, not even the two word “Revelation of Jesus” phrase in Aramaic. This particular edition of the Peshitto uses the Eastern book order – *Acts, James, 1 & 2 Peter, 1, 2<sup>nd</sup>, 3<sup>rd</sup> John, Jude, Romans, 1 & 2 Corinthians, thru Hebrews, and Revelation*. It was somewhat edited by Roy Reinhold , who supplied the Peshitto text for Codefinder, to conform to the Eastern Peshitta text in a few places , primarily in The Gospels. The differences are very few and minor. One version I tried is the 1905 Syraic NT. This version has 51 fewer letters than the Codefinder edition, which was edited from this version to conform more to the Eastern text, as just outlined above. The code does not exist in the 1905 edition; the two word phrase also does not occur there. The Eastern text 22 book Peshitta

also has none of the coded information of the Codefinder edition. Another Western edition has about 50 letters more than the Codefinder edition's 461,094 letters. It also shows no such code nor the two word phrase on which it was built.

The same results apply to the 25 letter code I found in 2002. All this along with my Divine Names experiment, has led me to conclude that The Western Peshitto , in its critical edition, corrected somewhat to the Eastern text of The Peshitta, but containing the 27 books and the Pericope Adultera of John 7:53-8:11, is the original text of The New Testament, very nearly letter perfect ! All the evidence I have compiled thus far leads to the conclusion that **The Peshitta NT** in its present form was authored by God Himself !
